

CASING PIPE

Why Lally Pipe & Tube? Because we can assure you the challenge you experience getting steel casing pipe for fast-breaking jobs is something we can help you with.

Since 1933 Lally has supplied thousands of projects with steel casing pipe for horizontal applications such as auger boring, directional drilling, microtunneling, open-cut excavation, pipe jacking, pipe ramming, and tunneling. And for vertical applications such as caissons, conductor holes, elevator shafts, foundations, mines, mouse holes, oilfields, rat holes, shafts, shoring, surface holes, and wells. Today, we're the leader in cut-to-length, spliced-to-length, and random length casing pipe from stock. And we're one of the Greenest too.

Lally's not the place for new prime tubular products with original Mill Test Reports. There are plenty of vendors doing that. But when you can use New Secondary, Structural, Surplus, and Limited Service tubular products, and trade original Mill Test Reports for Independent Test Reports, you'll find we're a Game-Changer for optimizing projects.

Here are some reasons to add us to your bid list:

- Rushed construction schedule.
- Save up to 23% or more off domestic mill pricing.
- Massive tubular inventory.
- Cut-to-length, spliced-to-length, and random length.
- Beveling and special end finishing.
- CNC threading & hydrotesting.
- Surface preparation, O.D. coatings, and I.D. linings.
- High-strength material options.
- Documents & testing.

We're the secret for more low bids. So add us to your bid list and give us a try on your next project.

All of us at Lally stand ready to help you with some steel casing pipe. We're incredibly effective. And best of all, we're easy to work with.
