

# PIPE PILES

Why Lally Pipe & Tube? Because we can assure you the challenge you experience getting steel pipe piles for fast-breaking jobs is something we can help you with.

Since 1933 Lally has set new standards for the pipe piling market while supplying thousands of projects. Today, we're the leader in cut-to-length and spliced-to-length pipe piles from stock. And we're one of the Greenest too.

Lally's not the place for new prime tubular products with original Mill Test Reports. There are plenty of vendors doing that. But when you can use New Secondary, Structural, Surplus, and Limited Service tubular products, and trade original Mill Test Reports for Independent Test Reports, you'll find we're a Game-Changer for optimizing projects.

Here are some reasons to add us to your bid list:

- Rushed construction schedule.
- Save up to 23% or more off domestic mill pricing.
- Massive tubular inventory.
- Cut-to-length and spliced-to-length.
- Attach conical points, end plates, etc.
- Ready-to-drive.
- Tough driving conditions.
- High-strength material options.
- Pile set-up.
- Increased pile loads.
- Lowest support cost per ton.

We're the secret for more low bids. So add us to your bid list and give us a try on your next project.

All of us at Lally stand ready to help you with some steel pipe piles. We're incredibly effective. And best of all, we're easy to work with.
